Re: SARS- CoV-2 ANTIBODY TESTING

TESTING FOR NATURAL IMMUNITY VS. VACCINATED IMMUNITY (SPIKE PROTEIN)

There are two different test options. It is essential to indicate which test is needed, so the correct test is performed.

Indicate one of the two tests:

- **In-house SARS-CoV-2 Antibody Total (Natural Immunity) Test Code 8706**
- **Send out SARS-CoV-2 S Antibody Total (Vaccinated Immunity) Test Code LC164090**

Vaccinated SARS AB Testing will be available at the Path Lab soon!

Our current in-house antibody testing is used to detect naturally exposed individuals by detecting the Nucleocapsid protein. We are working with Roche Diagnostics, which has been working closely with Moderna Inc., to soon offer a total IgM/IgG semi-quantitative antibody test to detect the Spike protein that is positive in vaccinated patients. This test will be available in-house by the end of February.

Please see our website for more information about our lab. www.thepathlab.com.

If you have any questions, please contact Nicho Bourque at nbourque@thepathlab.com or 337.312.1280.
